

# IntraSuite Bulk Actions

One Identity Manager provides fine, granular control over business roles and user entitlements – but updating large numbers of these records must be done on an individual basis. This is time-consuming and creates challenges in terms of compliance.

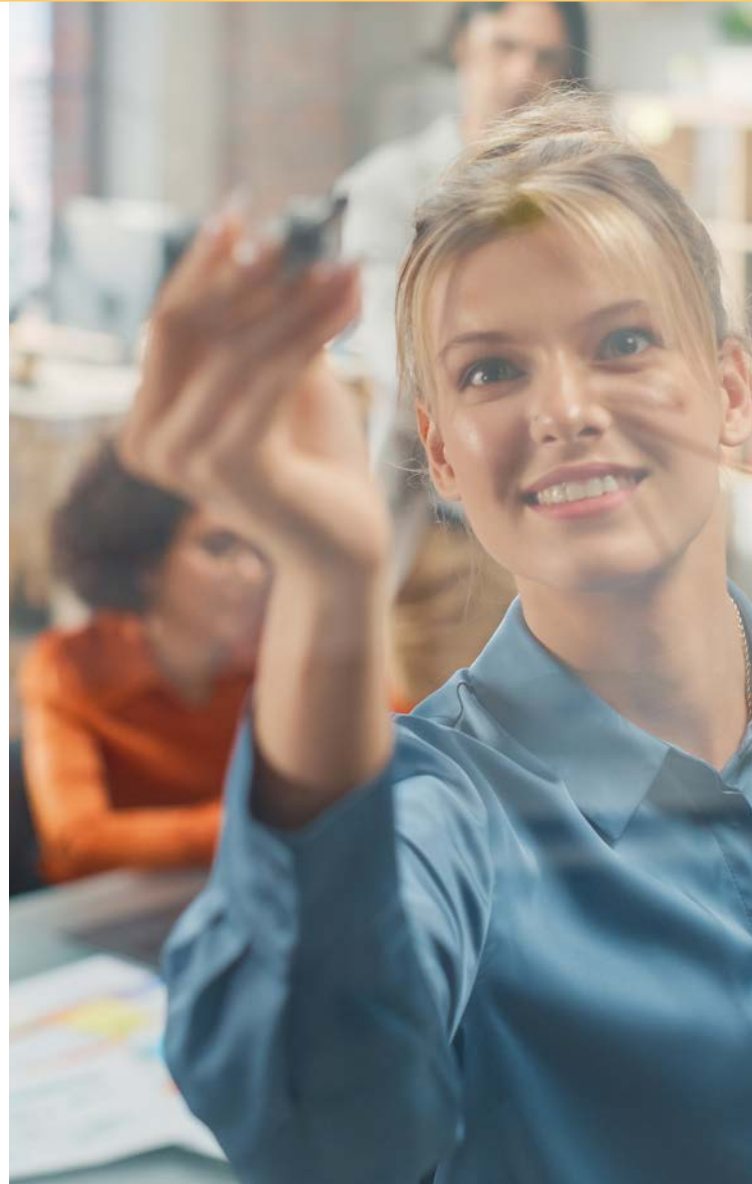

Bulk Actions provides administrators with a drag-and-drop experience that enables them to quickly make changes to large numbers of records. This simplifies repetitive operations such as onboarding employees, assigning roles/entitlements or updating organisational data and saves hours or days of work. Bulk Actions is tightly integrated with One Identity Manager.

## Bulk Actions provides:

- A user-friendly drag-and-drop interface
- Pre-configured CSV templates
- Rigorous validation
- Automated 'mass actions'
- Custom actions and workflows through high levels of solution configurability

## Bulk Actions enables:

- Greater productivity and accuracy
- Faster compliance
- Administrators: Minimal technical expertise required

## About Intragen

Intragen deploys, operates, and maintains a range of different IAM solutions for over 100 enterprise clients.

In the course of delivering our services, we have developed and now license a number of software tools (named IntraSuite) that help clients address their specific requirements.
