

IntraSuite Chameleon

Organisations who are deploying Okta to provide their customers with secure access want Okta onboarding and administration communications and tasks to be a branded customer experience.

Chameleon allows you to:

- Continue to work seamlessly, with Chameleon as an extension of Okta.
- Customise the Okta User Interface and email templates that support login, registration and account management experiences on a per-application basis.
- Quickly develop responsive pages optimised for both desktop and mobile environments. Key features include interstitial pages and bot mitigation capabilities, such as CAPTCHA, to enhance security and user experience.

Chameleon enables customers to meet complex brand and design needs without relying on the Okta Widget or extensive in-house development. This flexibility empowers businesses to create unified user experiences that align perfectly with their brand identity.

About Intragen

Intragen deploys, operates, and maintains a range of different IAM solutions for over 100 enterprise clients.

In the course of delivering our services, we have developed and now license a number of software tools (named IntraSuite) that help clients address their specific requirements.
